En la edición del Anuario Estadístico de la Pesca Mundial de la FAO correspondiente al año de 1965, en el renglón específico de captura de tortugas marinas, nuestro país aparece ocupando el primer lugar con un volumen anual de 2,200 toneladas, que representa un aumento del 33 por ciento en relación a la captura de 1962.

Actualmente, la captura anual de tortugas marinas representa el 1 por ciento de la pesca nacional y durante el año de 1965 alcanzó un valor de 10 millones 972 mil pesos.

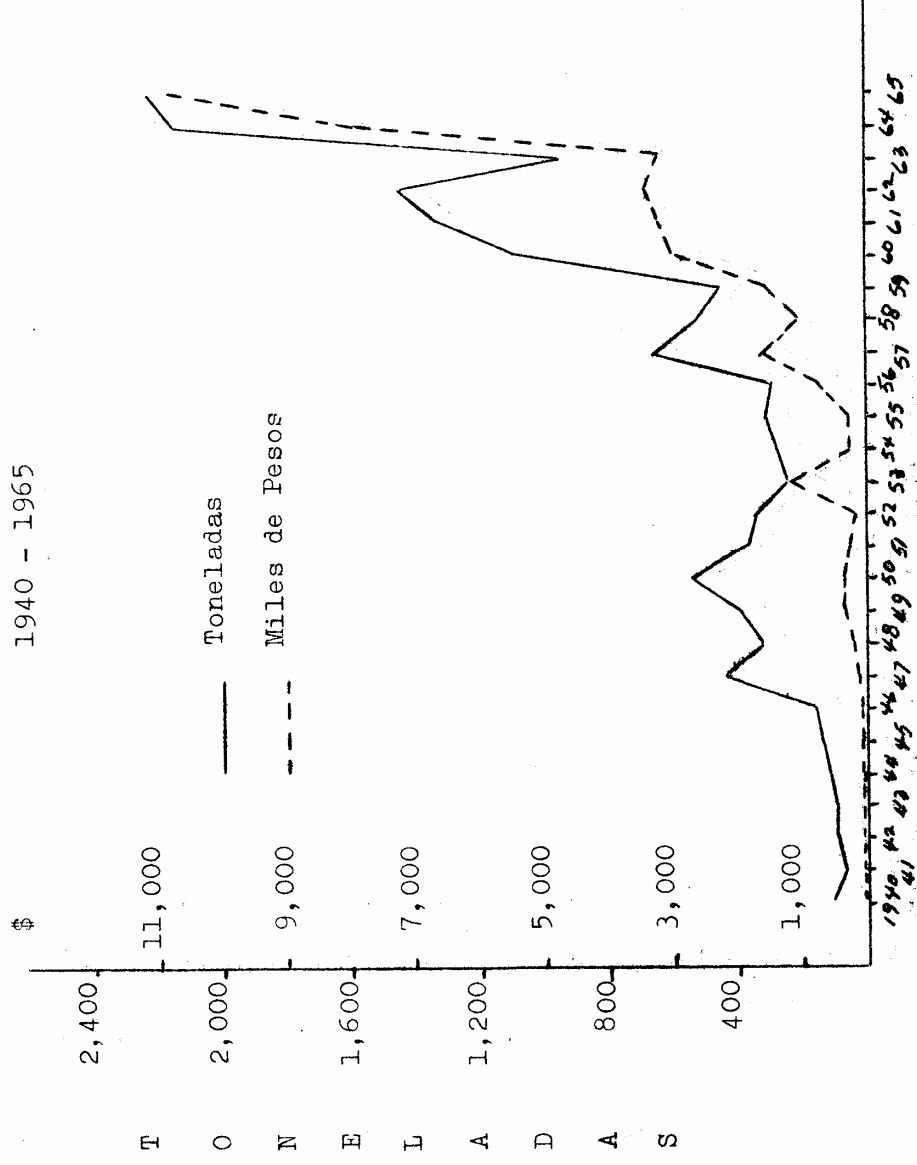

El propósito que nos ha dirigido a ampliar los datos estadísticos relacionados con la captura y el valor comercial de las diferentes especies de tortugas marinas, responde al deseo de que sea conocida mejor esta pesquería, a la vez que se pone de manifiesto la importancia que está adquiriendo la explotación de estos quelonios y los beneficios que de ellos se pueden obtener al ser aprovechados íntegramente, lo cual se puede observar por los datos que anexamos. Esto último ya está en vías de lograrse trayendo consigo un mejor medio de vida para el pescador mexicano.

Finalmente queremos señalar que los datos estadísticos de la captura comercial de tortugas marinas, fueron proporcionados por la Oficina de Estadística de la Dirección General de Pesca e Industrias Conexas, lo que hizo posible esta publicación. Agradecemos principalmente a la C.Lic. Josefina Puente Patiño, Jefe de dicha Oficina, lo mismo que al compañero Antonio Guerrero, quienes gentilmente nos dieron toda clase de facilidades para obtener estos datos.
